

## Singularity

i've been thinking today about the singularity: the point at which machines become smarter than humans, about an internet of things so smart that we don't know how to manage it with our existing software paradigms. And I wondered: a good manager will already be managing entities that are much smarter than them (because you don't want your best thinkers doing the paperwork, management is another discipline/ skill etc etc); is it perhaps time to think about how to use those management skills on clusters of machines?
